

Solar Roof Tiles

Imagine – no more ugly solar panels spoiling the look of your roof! The Star 8 Solar Tile takes the best of Australian traditional roof tile design and combines it with the latest solar technology. Star 8 Solar Tiles provide the homeowner with a fully integrated solar solution, removing the need for a retrofitted 'bolt on' system which has the potential to damage the existing roof.

Star 8 Solar Tiles combine high efficiency Solar Photovoltaic modules and traditional roofing tiles, creating an integrated, functional solar roof tile. Star 8 solar tiles are fully compatible with the majority of Australian tiled roof so retrofitting the solar tiles to your roof has just become an attractive option.

Increased efficiencies allow a 5KW system to replace approximately 340 standard roof tiles which is around 10% of the average roof space. And if you want to produce more power, just install more tiles! The Star 8 roof tile range includes mono-crystalline, poly-crystalline and thin film technology, enabling even the shady roofs to produce power – direct sunlight is no longer an essential requirement.

As we say....it just makes sense!!!
