

## Star 8 SolarSmart Roof

The Star 8 SolarSmart Roof is an innovative combination of high efficiency Solar modules and strong, lightweight resin roofing - creating a truly functional solar product.

Available in both monocrystalline and thin film technologies, the SolarSmart Roof is suitable for most roofs. Creating approximately 130 watts per square meter and 45 watts per square meter for the monocrystalline and thinfilm respectively, the Star 8 SolarSmart Roof is perfect for both new building projects and retro fit.

Why pay for a roof and solar? Combine the best of both. It just makes sense.
